All nonmetallic yard building sewer piping shall have an electrically conductive tracer wire (18-gauge, insulated copper, or heavier, green in color, or other approved materials) installed in the trench for locating the pipe in the future. The tracer wire shall run the full length of the installed pipe, with one end above the finished grade at the building end of the pipe, or at a clean-out next to the building wall, and shall be clearly marked. The other end of the tracer wire shall be spliced into the serving utilities tracer wire, when present.
